

PRODUCT END OF LIFE NOTICE

3XG ATM Tracker™ – United States Region Only

EFFECTIVE July 20, 2018

Major US cellular carriers plan to retire their 3G networks in the United States as of December 31, 2021.

Going forward LTE is the preferred network for Internet of Things (IoT) applications such as telematics, asset tracking, security, and video.

3SI has been working with the US carriers since 2017 to develop our next generation tracking solution, named 4XG, which will communicate on LTE networks.

Effective today, 3SI Security Systems will release the first 4XG product, our 4XG ATM Tracker. 3SI will continue supporting 3XG ATM Trackers already installed until the 3G network is retired in the United States as of December 31, 2021. With today's notice, new purchases of our ATM Tracker in the United States will be fulfilled with the 4XG ATM Tracker.

3SI believes it's important to be transparent about our transition plan for moving from the current 3XG ATM Trackers to the new 4XG ATM Tracker before the 3G network retires at the end of 2021. We're taking advantage of the time now to work proactively with all our clients and partners to assist in their migration to the more advanced network and product platform.

Clients outside of the United States will continue to be supported by the 3XG platform and can continue ordering current 3XG part numbers until further notice. As more products are scheduled for launch, we will continue to communicate specific details in advance to all impacted customers.
